Abstract:

In our life, we face problems as there are failures to build the system, culture and structure as per our requirements with the available limited resources. The intention of the presenter is to bring evidence with facts in order to understand how the problems needs to be identified, the structure, culture and system be established in order to overcome the problem(s). For this purpose we need not use complicated theories but with simple generic techniques and can be exercised with any person irrespective of whatever the knowledge, skill and experience they have. The wider use of this technique will bring happiness and thus enhancement of our quality of life with peace in our mind.
